

NexSite™

Tunneled Hemodialysis Catheter

Designed to facilitate
healing at the catheter
exit site

MARVAOMEDICAL

The **NexSite™ DISC™** (Dermal Ingrowth Support Collar) features a biomaterial tissue ingrowth scaffold and a guide that assists with the direction of the catheter. The polyester biomaterial scaffolds on the catheter shaft and DISC are aligned to facilitate tissue ingrowth, which is considered important in reducing the source of extraluminal infection in patients requiring long term catheterization.

NexSite ESM™ (Exit Site Management) Technology

NexSite First in Man Study

NexSite facilitates healing at the catheter exit site to establish a natural biological seal between the skin and the catheter.

NexSite Hemodialysis Catheter Description:

- Radiopaque 15.5Fr step-tip dual-lumen catheter with bifurcation hub and extension tubes and luer connectors
- Manufactured from extruded polyurethane
- Available in 24cm, 28cm, 32cm, 36cm and 40cm lengths
